

 **MARVY MILLIE JAGIELLA**

PET OWNER: **JAGIELLA**

DATE OF RESULT: **9/6/24**

LAB ID: **1916627167**

Chemistry (continued)

TEST	RESULT	REFERENCE VALUE	
Cardiopet proBNP (Feline)	^c 25	0 - 100 pmol/L	<div style="border: 1px solid black; width: 100px; height: 15px; position: relative;"><div style="position: absolute; left: 50%; top: -50%; transform: translate(-50%, -50%); width: 10px; height: 10px; background-color: black;"></div></div>

- a SDMA and creatinine are within the reference interval: impairment of GFR is unlikely. Recommended next step: evaluate complete urinalysis.
 - b Index of N, 1+, 2+ exhibits no significant effect on chemistry values.
 - c Cardiopet proBNP <100pmol/L Normal. NT-proBNP concentration is not compatible with increased stretch and stress on the myocardium. Clinically significant heart disease is unlikely at this time.
- Please note: Complete interpretive comments for all concentrations of Cardiopet proBNP are available in the online directory of services.

Endocrinology

TEST	RESULT	REFERENCE VALUE	
Total T4	^a 1.6	0.8 - 4.7 µg/dL	<div style="border: 1px solid black; width: 100px; height: 15px; position: relative;"><div style="position: absolute; left: 50%; top: -50%; transform: translate(-50%, -50%); width: 10px; height: 10px; background-color: black;"></div></div>

- a Cats with no clinical signs of hyperthyroidism and a T4 within the reference interval are likely euthyroid. Cats with concurrent illnesses may need further assessment. For cats being treated for hyperthyroidism with controlled clinical signs, this result suggests adequate therapeutic response.
